Colour	1Kg Bottle
BK	DTF-B01KC
C	DTF-B01KC
M	DTF-B01KM
Y	DTF-B01KY
White	DTF-B01KW

The DTF process

Design

Create your design using your preferred choice of design software (i.e. photoshop, illustrator, etc).

RIP

If you are printing white on top of colour you will need to use a RIP.

Print

Print your design onto your choice of coated PET film.

Apply

Apply powder adhesive evenly onto printed film. If using manually, shake off excess or if using a powder shaker follow unit instructions.

Bake

Melt the adhesive onto the film using a heat press, oven or heated shaker unit. Ensure even heat through-out at a temperature of 160C.

Press

Press your design onto a substrate. Applicable on cotton, polyester, leather, cardboard and other flat, rough and rigid materials.
