**Ringcraft**  
BOXING FACILITIES

## THE CHALLENGE

Ringcraft have been producing, manufacturing and hiring boxing rings for over 25 years now. They supply companies such as Sky, BBC, ITV and all of the major boxing promoters in the UK and abroad. They have had a JETRIX printer for several years and frequently use it to produce the graphics for many of the national, international fights and other events.

**Size:** 3.2m edge to edge printing size

**Speed:** Up to 90 sqm/hr with a double 4 pass printing process

**Colours:** CMYK, LC, LM and White

## THE NEXT STEPS

The Anthony Joshua versus Kubrat Pulev fight in December 2020 was one of the only sporting events in that pandemic year to actually happen with a live audience.

Due to the pandemic and on-going restrictions on audiences attending events like this, only 1k people were allowed to watch. So, the venue needed to be properly dressed with graphics to compensate for the lack of audience numbers. This was a significant project where all the venue graphics were printed on a JETRIX LXiR320 by Ringcraft.

*"What was great was the JETRIX LXiR320 just got on with it. It's awesome! It kept churning through the jobs, consistently producing fabulous quality and perfect colour vibrancy. Then when it was done, it was ready and waiting for the next project."*

**Mike Goodall, MD, Ringcraft**

## THE OUTCOME

As a result, in the region of 50 – 60 banners were produced over the course of the month, some of which were 6½ by 2m in order to fill the spaces.
